

BIG QUESTION

Can life come from non-life?

In 1953, Stanley Miller ran sparks through a flask of gases and got a few building blocks of proteins. But building blocks are a long way from a living cell.

Even the simplest cell needs DNA, proteins, and an oily skin, all at once. Lose any one, and it doesn't work.

In 2016, scientists made the DNA for a tiny cell, but they had to put it into a cell that was already alive. The Bible says life comes from the living God.

Look it up!

Find each verse in a Bible. Write the answer on the line.

Psalm 36:9

What is with God?

John 1:3

What was made without him?

John 1:4

What was in him?

John 1:14

What did the Word become?

Memory verse

“The heavens declare the glory of God; the skies proclaim the work of his hands.”

Psalm 19:1

Fill it in: “The heavens declare the _____ of God; the skies proclaim the work of his _____.”

Psalm 19:1

I can say it! ☆ ☆ ☆ Color a star each time you say it.

Talk about it

1. Why is a pile of building blocks not the same as a living cell?
2. Scientists needed a living cell to start their new one. What does that tell you?
3. John says, “In him was life.” What does that tell you about Jesus?
