

BIG QUESTION

Are all humans one family?

“All human beings are 99.9 percent identical in their genetic makeup,” says America's National Human Genome Research Institute. In 2002, geneticists compared more than a thousand people from fifty-two populations: 93 to 95 percent of the variety was between people inside the same population, and only 3 to 5 percent separated the major groups.

In 2004, three statisticians modeled the whole human family tree. In their models, the most recent common ancestor of everyone alive lived “just a few thousand years ago.” At Babel the family was scattered. Through Jesus, God gathers it again, “from every nation, tribe, people and language.”

Crack the code

Every letter was moved 4 places forward in the alphabet, so A became E. First write the code letter under each real letter (E under A, F under B...). Then use it to read what Paul said.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z

J V S Q S R I Q E R L I Q E H I

E P P X L I R E X M S R W

Memory verse

“Through him all things were made; without him nothing was made that has been made.”

John 1:3

Fill it in: “_____ him all _____ were made; _____ him _____ was made that has been made.” John 1:3

I can say it! ☆ ☆ ☆ Color a star each time you say it.

Talk about it

1. Why can't likeness alone settle where we came from?
2. Every war between peoples is “a fight inside the family.” What does that change about how we treat others?
3. God “commands all people everywhere to repent.” What does it mean to turn to him?
